Hi! I am Jaime and I am an extremely passionate software developer. I love the creative side of it, building things, that immense power to be able to create anything you can imagine and share it with others. I see myself as an artisan, I put my heart into my work and I pursue the creation of beautiful experiences for people to enjoy.

I love solving problems, making things simple, fixing things that are not broken but could be improved. I am practical as well, I understand that software development and creativity are iterative processes, I start with the simplest and most straightforward solution and I go iterating, improving, polishing over that until I achieve what I want (red, green, refactor!). I love learning, every new technology is a new wonder to me, and I like to share my excitement about what I learn with other people.

Above all, I strive to be awesome at what I do

EXPERIENCE

The past
a.k.a. stuff that doesn't fit here

Skynet

March 2011 · Sept 2011 · March 2013 · March 2014 · January 2015

SOFTWARE DEVELOPER
SYNTRONIC AB/ERICSSON

During these 6 months I worked as an external consultant at Ericsson in the LTE (Long Term Evolution) division.

My main role was to improve Ericsson's python development standards in an internal project, a python compiler to parse documented requirements into C++ and Java executable code. My job was three-fold, I had to:

1. Improve the status of the project, re-design, re-architect and re-factor.
2. Share my knowledge on best practices in python
3. Develop the project further

I did this by a combination of teaching, leading by example, pair programming, organizing sessions and talks on best practices and by introducing automated testing in python.

#java #best-practices #teaching
#leadership #pair-programming #scrum

SOFTWARE ENGINEER
IFS R&D

My job at IFS was to add value to the company's offer in ERP systems by using my expertise in .NET and software development to develop IFS products:

1. I integrated IFS with Microsoft Office driving all development with TDD.
2. I integrated the leading real-time workforce scheduling system IFS 360 with IFS Applications 8.
3. I built a note taking application with a windows phone app, a responsive web client and an Azure backend cloud infrastructure as an innovation project.
4. I performed the role of ScrumMaster and started the P2P Code Academy to share knowledge on software development and best practices.

.NET SOFWARE DEVELOPER
MEDIUS R&D

At Medius, I worked as a .NET Developer building MediusFlow XI, a workflow platform with a range of applications focused on financial accounting. MediusFlow XI is a SPA (Single Page Application) built with web standards and .NET technologies that runs on Azure.

I worked in an agile environment with DDD, TDD, CI, with a very UX oriented workflow, both in the front-end and in the back-end.

From November of 2013 I also started working on managing and coordinating the development of MediusFlow XI for iPhone and developing the backend infrastructure to support it.

I also ran a code guild and gave talks.

OWNER
JAIMEGONZALEZGARCIA.COM

In March 2014 I started my own company because I wanted to have an outlet to channel my creativity and passion for software development, to have complete freedom in my creative pursuits and the chance to experiment with all facets of creating new products. I hope that, by doing this, I will be able to create something of value, something that will enrich people's lives in some measure.

At present I am writing a book about JavaScript for C# developers with a flavor of fantasy and a dash of geeky humor. Also write often at my blog barbarianmeetscoding.com.

FULL STACK DEV/UX DESIGNER
IT CONSULTANT
ACTIVE SOLUTION AB

In early 2015 I switched from product company to consultant. Within a very short space of time I have worked in many projects with many roles, from full stack developer building a licensing platform, to lead front-end developer of a booking web application, to UX designer and full-stack again for a B2B dashboard.

During this time I have also become a MCSD in Web development, and learnt A TON, like crazy... a lot, a lot xD

EDUCATION

MASTER THESIS LINKÖPING UNIVERSITY

"Proposal for a vision-based cell morphology analysis system"

MsC TELECOMMUNICATIONS ENGINEERING UNIVERSIDAD DE OVIEDO

Specialized in signal theory I got a strong background in signal processing, linear systems, electromagnetism, electromagnetic fields, communication electronics, networks and programming.

AWARDS/CERTS	Microsoft Active Professional 2013 and 2014, MCSD Web Dev
INTERESTS	Malin! Coding, Books, Sci-Fi, Fantasy, Writing, Blogging, Gym, Drawing
LANGUAGES	Spanish, Fluent English/Swedish, Mediocre French/German/Japanese
GROUPS	SWENUG
